

KEY FEATURES

- Easy to use
- Windows & Linux versions
- Two-way communication
- Lightweight
- Secure using SSL/TLS

WaveARXPlugin is a service that glues ASSA ARX access control system with Wisenet Wave VMS from Hanwha Techwin.

The plugin can be installed on either ARX or Wave server as well as on a separate machine using secure SSL/TLS protocol to communicate.

Setup rules in the user friendly configuration tool to get events from ARX to create events, bookmarks or other actions in Wisenet Wave.

The communication is two-way meaning you can also open a door from events in Wave, for example by pushing a created button in the Wave desktop or mobile app.

REQUIREMENTS

- PC with Windows 10 or Linux Debian based distro
- Connection over TCP/IP to ARX and Wisenet Wave servers
- ARX need import/export license (included in Advanced and Pro)
- Wisenet Wave need no special license
